See PDFVolume 25, February 2022, 102114 Get rights and content Environment and impact of human health Ozgur Karcioglu, Department of Emergency Medicine University of Health Sciences, Istanbul Education and Hospital Research, Fatih, Istanbul, Turkey Banu Arslan, Master of Science in Executive Healthcare Management University of Texas, Dallasita The Toxicity of Heavy Metal refers to a superexposition for lead, mercury, arsenic, cadmium, chromium or other high density metal element or that causes irritation or damage to the body. Heavy metals can be found naturally in the environment, in the houses or in the workplace. Severe sudden exhibits as well as moderate exposures over time can cause toxicity. Depending on the exposure, metals can increase the risk of cancer, the deficient production of red and white blood cells, causes nausea, vomiting, rice water diarrhoea, encephalopathy, MODS, LoQTS, painful neuropathy, blue vomiting, GI/hemorrhage, hemolysis, MODS (ingested); MFF (hemorrhage), pulmonary Open Access Magazine is a platform, in which all articles are designed online with fast review process and anyone in the world can access it for free. The main objective of this journal is to provide the quality of data on Heavy Metal toxicity and related diseases due to severe exposure to Heavy Metals. Impact factor: 0.87* Send manuscript in the Submission System Online or send as email attachment to the Editorial Office at “Heavy Metals” are ,atarp ,oruo omoc sosoicerp serbon sotnemele somartnocne ,sele ertne ,ossid m©ÃlA .]4 [siaicepse sacimÃuq seµÃ§Ãamrofsnart arap etnemlaicifitra sodatejorp "socin¢Ãgronioib" serodasilatac ed lartnec omot¡Ã o omoc mautaâå sodasep siatem setnerefid ,etnemetneceR .cte ,oinªÃtsgnut ,erboc ,obmuhc ,ohnatse ,ocniz ,orref ,olpmexe rop ,ocig³Ãloncet odacifingis etnelecxe ed o£Ãsâå sodasep siatem sotiuM .relatnemme ojieuq od ocinºÃ robas o mes rezaf euq airet temrug o ,odasep latem ed laicepse otsopmoc esse meS ;]3[ocin´Ãiporp odic¡Ã od o£Ã§Ãatnemref ed aiv ad ovitudor omar on laicnesse etnapicitrap mu ©Ã ,21B animativ oxelpmoc on lartnec omot¡Ã omoc odnauta ,sodasep siatem ed otlaboc O .]2[onamuh omsilobatem o odot odnanoislupmi m©Ãbmat socig³Ãloib sossecorp soir¡Ãv arapâå siev¡Ãsnepsidni seµÃ§Ãnuf moc ,siaicnesse sotnemele o£Ãs ocniz uo oinªÃles ,erboc omocâå sodasep siatem snuglA .]1[soedÃnatnal e o£Ã§Ãisnart-s³Ãp siatem ,o£Ã§Ãisnart ed siatem so odnegnarba ,6 a 4 ed sodoÃrep sod ,61 ed 3 sanuloc sa ,rebas a ,o£Ãel od etrap a mapuco)edadisned ed oir©Ãtirc o moc odroca ed(otcirts usnesâå sodasep siatem so euq somednerpa ,sotnemele ed acid³Ãirep alebat a arap odnahlO .osrevinu osson od o£Ã§Ãurtsnoc ed socolb 811 ed latot od 99 arap ,atla ed seteugof âsodivet siatemâ omoc sodacifissalc sotnemele ed omix¡Ãm oremºÃn o ,acim´Ãta assam ed oir©Ãtirc oa odnerroceR ;siatem o£Ãn ed omsem o£Ãsulcni a masuac savitanretla seµÃ§Ãinifed sa sabmA .sasufnoc e sorre a sasneporp etnematla o£Ãs seµÃ§Ãinifed sassE ;02 a roirepus ocim´Ãta oremºÃn mu uo 32 a roirepus acim´Ãta assam amu megixe âsosovaeh siatemâ arap salpma siam seµÃ§Ãinifed sartuO ." thgiLÅ ¬â ¢Ã siatem sortuo ed ol- ¡Ãicnerefid e odasep latem mu rinifed arap adasu ©Ã 3'mc mc g 5 sonem olep ed edadisned amu ,etnemlareG .atenalp osson od atsorc a adot etnarud sodartnocne res medop sele ,axiab etnatsab o£Ã§Ãartnecnoc me marroco etnemlamron arobmE .edadisned atla aus e atla etnatsab acim´Ãta assam aus rop sodaziretcarac sotnemelE ,ocinªÃsrA ,ocinªÃsrA ,oimd¡ÃC ,oirºÃcreM ,olpmexe rop ,seled sotium ,odal ortuo roP .]5[anitalp uo oid³Ãr uocifireV .]11[lanomroh esetnÃssoib an odivlovne ¡Ãtse ,ossid m©ÃlA ;etnadixoitna mu omoc otircsed ©Ã oinªÃles O .]01[ocniz ed soded sod samizne ed etniutitsnoc omoc latnemadnuf ©Ã ,zev aus rop ,ocniz O .]9[sedop³Ãrtra e socsulom me aninaicomeh an lartnec omot¡Ã o omoc etnemlaicepse ,oinªÃgixo e snort©Ãle ed etropsnart on etnahlemes lepap mu ahnepmesed erboc O .oenÃugnas otnemgip od omot¡Ã ,anifa-anifa-oinªÃgixo omoc o£Ã§Ãaripser ed ametsis osson me etnatropmi lepap mu ahnepmesed m©Ãbmat orref O .]8[oicÃni o edsed raripser es acib³Ãrea adiv a manrot euq ,somorcotic so mes reviverbos levÃssop aires o£Ãn ,somos omoc sodigÃr socib³Ãrea seres araP .sotnemele ed acid³Ãirep alebat ad 4 odoÃrep on sodartnocne etnemetnanimoderp o£Ãs selE ;socig³Ãloib sossecorp sotium arap siaicnesse ,sodasep siatem ed ailÃmaf a ertne siaigitsev sotnemele snugla metsixe euq razitafne arap etnatropmi ©Ã o£Ã§Ãailava A .] 1[leuqÃn e orrefâå sodasep siatem son etnemetnanimoderp etsisnoc ejoh euq ,arreT ad oelcºÃn o mavamrof e arreT ad ortnec on mavadnufaâå sodasep siatem so ,odiuqÃl are adnia arreT ad otnam o odnauq ,s¡Ãrta sona ed seµÃhlib 4 ed seµÃhlib 4 ed acreC .saen¢Ãrretbus saug¡Ã e soir ,olos on o£Ã§Ãagitim e o£Ã§Ãaivixil aus me maratluser o£Ãsore a e omsirepmetni O .ratnemele e acil¡Ãtem amrof aus me merroco m©Ãbmat uo otacilis ed sahcor uo odix³Ã ,otaflus ,otanobrac me sodagil etnemacimiuq etnemlapicnirp sodartnocne o£Ãsâå sodasep siatem so ,iuqA ;)orref(%5 ©Ãta e)serbon siatem(BPP ed saxiab saxiaf sa ertne saxiab etnatsab seµÃ§Ãartnecnoc me ertserret atsorc an merrocoâå sodasep siatem ,etnemlamroN .sedi³Ãretsa od sotcapmi sod soir¡Ãnigiro ,u©Ãc olep sodaivne etnemlaretil marof sovaeh siatem sO .]7[ed sotief res medop semirc siapicnirp so euq siairetam so sednes ,asodivud edadiralupop marahnagâå sodasep siatem snugla ,otxetnoc esseN .]6[o£Ã§Ãartnecnoc axiab me ¡Ãj socix³Ãt sotiefe mecrexe selE ;"acimÃuq ad orucse od odal" o etnemacissalc matneserper sortuo e obmuhc ,muillahT ©Ã ©Ã euq ,21B animativ an lartnec omot¡Ã o omoc etnemlaicepse ,ralulec omsilobatem on setnerefid sapate e soxelpmoc sotsopmoc ed esetnÃssoib an ovitacifingis are otlaboc o euq For mobile divisions, blood formation, nervous system and proper -proper (see supra) [12]. In addition, vanhadio and mangans are important for regulation and functioning of vain enzymes [13], while some metabnic functions are also attributed to the elements typically known as chromium, ARSANICO AND NOT. Regarding the arsenic, this element was recently revealed as a natural constituent in the herring caviar, where it was shown to replace fancosprao in phosphatidilcoline lipids, the so -called arsenolipadiums [14]. In addition, we must mention the role of molybdennio in some reassured reactions [15], in addition to the function of the metabolism of some Microalgae of the Diatomophyceae [16]. In addition, the role of heavy metal tungsthanio in prokaryotes metabolism is scientifically confirmed [17]. To give an impression of the amounts of heavy metals present in our human body, so the weighing metal â € œ € we are firmly carrying with us, we can estimate that only about 0.01% of our mass It originates from the presence of heavy metals, with iron (about 5 g in one person weighing 70 kg), zinc (2 g), lead and copper (0.1-0.2 g each) being the four metals weighed in our body, 18 can be businessable. In addition to the above mentioned and mitigation of weighted metals and weathering, these elements are mainly mobilized mainly by the action of human beings during their Fanic Liberation (Extraction, foundation) or (reductive) (reductive) of mint and the subsequent processing for various applications. Other processes that release heavy metals to the ecososphere involve their (agro) industrial use, domain, automotive, mother, trico and another technology use, resulting in their extensive distribution in aquatic environments and land. Currently, we witness growing global concerns about their adverse health effect and its negative lasting impacts on biosystems. Some heavy metals are reported or at least suspected of being carcinogenic (hexavalent chrome, arsenic, cobalt, nickel, antimony, vanadium, mercury), mutagenic (arsenic, vanadium), teratogenic (arsenic), allergenic (nickel), or endocrine-disruption (silver, copper, zinc, selenium). Others (e.g. thallium) lead to neurological and behavioral alterations, particularly in the case of children, damage of the central nervous system (mercury, lead, thallium, manganese and tin), damage of the bone marrow and osteoporosis (cadmium); they are hepatotoxic and/or nephrotoxic (cadmium, cadmium, mercury, heptavalent mangadium); they cause heart rhythm). Advertising Classically, the quantification of heavy metals involves well-established techniques, such as wet chemical methods (gravimetric, tithrimetric, colorimetric, etc.), coupled plasma spectrometry/atomic emission (ICP/AES), inductively coupled plasma with spectrometric mass detection (ICP/MS), or atomic absorption spectroscopy (AAS) [20, 21, 22]. In addition, several ion selective electrodes are often reported for the determination of heavy metals [22, 23]. Currently, new, robust, sensitive, selective, cheap and fast optical [24, 25, 26], chemicals [27, 28] and biological [29, 30, 31, 32, 33] sensory systems are currently in development. Such advances in analytical chemistry are currently firmly linked to nanotechnology [26, 28, 34]. In addition, the so-called paper laboratory sensors were also developed for the determination of heavy metals, as demonstrated for the quantification of mercury, silver, copper, cadmium, lead, chromium and nickel [29]. This sensor, operated by an immobilized enzyme, is an example for the so-called biosensors, which synergically combine the scientific fields of biotechnology and microelectronics; such mu mu me metsisnoc Biological component in combination with a transducer [30]. As a very recent technology, the so-called genetically encoded fluorescent sensors can be used to monitor heavy metals within biological cells and have already been evaluated for the determination of heavy metals such as zinc, copper, lead, cadmium, mercury or arsenic [35] .Dvertiso elevate the negative impacts of heavy metals, the remediation techniques are increasingly enhanced in order to address the increasing environmental pressure of the public to reduce. Severe deficiencies, such as very high cost, excessive labor costs and invasive change of soil and microflora properties [36]. Traditionally, the remediation of heavy metal contaminated soils turned to simply dig the contaminated soil and subsequently discard it in sanitary landfills. Of course, this strategy of disposal only postpones the echo-problem, transferring it from one place to the other, and also generates dangers related to the transport of precarious soil and the leaching of heavy metals at the final disposal site. In the case of heavy metal polluted water, lime alkaline precipitation is known as a more advanced and perhaps more efficient traditional technique for the treatment of heavily polluted effluents. Lime precipitation can be effectively used to treat waste water with metal loads exceeding 1 g l abe. However, the remaining properties of heavy metal-alkaline need final disposal [37]. Modern physical and chemical approaches for the remediation of heavy metal pollution involve the use of adsorption in new adsorbents such as nano-carrinhos, ion exchange techniques, removal by means of advanced membrane filtration techniques, electrodialysis or photocatalysis. Among these new physical-chemical techniques, new adsorption andThe most thoroughly investigated and most commonly applied to treating contaminated residuals [37, 38]. Among the new tampons, both inorgain materials (kaulinite, montmorilonite) and [39] and organic (eg, agrifier or biochar waste) [40, 41, 42, 43] were studied for recovery of heavy metals. In this context, the application of nanopartães is the basis of carbon, metal or metal as adsorbents benefits from highly susceptible superfancies and metal adsorption and expedient reactivity. Here, the mechanisms of nanomaterial interactions with, on the one hand, heavy metals â € ‹€‹ and, on the other hand, heavy metal with constituents of additional residual water with groups of connection to metal need be understood to optimize recovery processes [44]. Photocatation uses fantons of the UV-Near region of the electromagnetic spectrum of light and, when operated intelligently, is capable of degrading tannxical organic pollutants in parallel to metal recovery in metal just a process step. This technique resorts to photocatalytic semiconductors, for example, TiO2, which, when illuminated with UV light, generate highly reducing trons that, in turn, reduce heavy metal twisters contaminated. As an example, photocatation was successfully implemented for the reduction of dramatically precarious hexavalental chromium for its trivalent form about 500 times less tonnic. In the case of precious noble metals, such as gold, this process will not only mitigate an environmental pollutant, but also value -added material mines for later use ("phototorcovery") [45]. Firemediah is an emerging technology to overcome the disabilities of mothers discussed above. During fitorremedia dom, plants act synergistically with various soil microns, which convert heavy metals â € hydons to a bioavailable form for plants, finally contaminant concentrations in affected environments.
